CASPER

Features

Casper is a stylish and contemporary café and dining plastic monoshell stacking chair design for all manner of catering and hospitality environments in both the corporate and leisure markets as well as being ideal for modern meeting applications and public seating with the beam mounted version. The distinctive angular faceted upper backrest blends down into the curvaceous seat in a unique way while the equally distinctive slot in the lower back, relieves the volume of the chair aesthetically giving it a lighter look.

Casper provides a relaxing, supportive, comfortable sit with both flex and support in equal measure and without recourse to visible ribs and reinforcement for its structural integrity, resulting in crisp clean lines and an elegant ergonomic body form profile. Although in its development, durable production materials and finishes have been a priority for longevity of use, all parts are recyclable and replaceable.

Finishes

The superior moulding comes with dual surfaces; a high gloss finish to the outer face and a textured matt finish to the inner face and in a choice of six colours. Frames are offered in a polished chrome finish as standard.

All models can have armrests or an upholstered seat pad. The sculpted looking cast Aluminium beam armrests convey the dynamism of the beam legs and the curvaceousness of the seat shell simultaneously, while the slimline seat pad looks particularly stylish in leather. This is a truly versatile and adaptable design for a multitude of seating uses.

Certification

Design: Allermuir Design Team

Allermuir's in-house design and development team is one from a mixture of design, engineering and production backgrounds. As well as working successfully in developing the ideas of freelance furniture designers and products for architects and interior designers specific projects, the departments acquired market knowledge has also led to a number of highly successful in-house designs.
